

LEE 100

105mm
Landscape
Polariser

To fit the Polariser to the 100mm Filter Holder you need a 105mm Accessory Ring (sold separately). The ring attaches to the front of the holder and allows you to rotate the Polariser independently of any other filters in the holder.

1.
Unscrew the four
brass screws at the
front of the filter
holder

2.
Remove the thin
front face blades

3.
Screw a 105mm
Accessory Ring to
the front of the filter
holder using the
existing screws

4.
Screw the Polariser
to the Accessory
Ring

It is advisable to add a small amount of lubrication to the 105mm Accessory Ring from time to time. The Landscape Polariser is slimline and has the minimal amount of thread required to attach it to the Accessory Ring. A small amount of oil (olive oil / thin engineering oil / vaseline) on a cloth can be wiped around the thread of the Accessory Ring to keep it running smoothly.
