

LEE 100

NIKKOR Z 14-24 f2.8 S Holder ©

To support the launch of the new
NIKKOR Z 14-24mm f2.8 S lens,
LEE Filters are proud to announce the
award-winning LEE100 filter system's
latest addition

- Redesigned LEE100 holder, developed specifically for the NIKKOR Z 14-24mm f2.8 S lens.
- Made from aluminium alloy, with an anti-reflective coating and an integrated gasket to protect against light leak.

- Uses the same interchangeable, modular guide blocks as the standard LEE100 system.
- Innovative quick-change filter frames enable photographers to use their existing 100 x 100mm standard and 100 x 150mm graduated LEE Filters.

- Featuring a bespoke compression system for a secure fit without damaging the lens barrel
- Visual “smart alignment” markings help to secure the holder in the correct position on the lens

Newly designed foamless stoppers for optimum wide-angle performance.

Integrated handling tabs on the filter frames allow for easy positioning without having to directly touch the filter surface, mitigating fingerprints and increasing the filter's usable visible area.

A physical stop on the filter frames optimizes the filter's position relative to the lens, ensuring the filter's edge won't drop into the shot.
